

Security Audit

Helping you **manage business risk** in uncertain times.

“DON'T DICE WITH DEATH. ELIMINATE YOUR BUSINESS RISKS BEFORE IT'S TOO LATE”

WHAT IS IT?

Information Security is about protecting your vital data and information assets from a wide range of threats to ensure business continuity, minimize risk, and maximize return on your investments and business opportunities. A security audit is the only sure way of knowing how secure your company's assets really are.

WHY IT MATTERS

The increasing interconnectivity of computer systems within companies and with the Internet means that your data is exposed to a growing number of threats. An audit helps you identify the gaps in your security such as improperly implemented hardware and software, potentially dangerous practices and procedures and human error. A security audit helps you answer some of those nagging questions...

- **Am I getting value for the money I spend on security?**
- **What are the main dangers that threaten my particular business?**
- **Are my staff aware of their legal obligations and responsibilities concerning IT security?**
- **Is my data protected from espionage, sabotage, vandalism, fire, flood, computer hacking and business interruption?**

WHY CHOOSE US

- Decades of expertise in network and Internet security with ISO-27002 certification.
- No strings attached. Our goal is to help you identify your security issues and provide advice on how to proceed.
- No charge if your security is up to standard.

OUR PROCESS

1. Interviews to identify critical assets and business processes.
2. Review the position of Information Systems.
3. Identify vulnerabilities to assets and business processes.
4. Risk Analysis.
5. A clear report of cost effective recommendations.
